

ABSTRACT OF DISCLOSURE

The invention is a composition, device, system or method for mitigating odors or other contaminants from a target environment. The present invention relates to devices that contain a formulation for removing, in whole or in part, foul odors from the air. In certain embodiments the present invention provides odor-mitigating reagents that are delivered by means of a spray dispenser. The present invention also contemplates applications where the invention can be delivered via a foam or gel dispenser. Certain embodiments of the invention therefore particularly relate to devices such as deodorizers, air fresheners and the like.
